

INVERTER HOSE REPLACEMENT

CARE-LEVEL ②

The high quality that you are familiar with from our induction plants can of course also be expected in the area of **inverter hose replacement**. Our flexible service offers repairs in manufacturer quality with minimum delivery time.

What are good reasons to replace a hose?

- Dirt deposits in the hoses, as this leads to lower flow and possibly to thyristor failure
- Plasticizers from the hoses evaporate – this causes the hoses to become brittle and leakage occurs
- After five to six years, the hose must be replaced according to the inverter operating instructions
- It is also recommended after longer plant shutdowns

The inverters are divided into 4 power classes:

- Up to 2.8 MW
- Up to 4.25 MW
- Up to 8 MW
- Up to 18 MW

Your advantages:

- Higher plant availability
- State of the art technology for more safety
- Protection against further damage in case of leaking hoses

The quick replacement – this is how it works:

As soon as the order is placed, our service team will be available for you at short notice. When it comes to service-call charges, we charge only 50.00 euros per driving hour per person for all customers in Europe – a unique special price that we grant you so that you can keep an eye on the costs when restarting the plants and not be confronted with unpleasant surprises. The water must be drained and the system has been switched off prior to the appointment.
